DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of claims 38-46 in Paper No. 1/6/04 is acknowledged. The traversal is on the ground(s) that the inventions are sufficiently related that it would not be an undue burden upon the examiner to examine all the claims (figures). This is not found persuasive because the embodiment in figures 13C and 13D are patentably distinct and each require a separate search.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 38-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Schroder (US Patent 6,215,135).

Regarding claim 38, Schroder discloses in figure 1 an electrostatic discharge protection circuit coupled to a node VDD and a reference potential Vss, the electrostatic discharge protection circuit comprising a substrate having a first conductivity type, coupled to the reference potential; a well region WLL having a second conductivity type, formed on the substrate and coupled to the node; a first doping region d5 having the first conductivity type, electrically coupled to the node; and a second doping region d1

Art Unit: 2814

having the second conductivity type, disposed on the substrate and electrically floated on the substrate.

Regarding claim 39, a third doping area d6 having the second conductivity type disposed in the well region, electrically coupled to the node.

Regarding claims 40-41, the electrostatic discharge protection circuit has a forth doping region d3 having the first conductivity type, disposed at the surface of the substrate near the well region, electrically coupled to the reference potential, for forming an ohmic connection at the substrate.

Allowable Subject Matter

4. Claims 42-45 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter:

The primary reason for indication of allowability of claims 42-45 is the inclusion therein of the limitation that of the presence of the fifth region and the connections made with that region.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

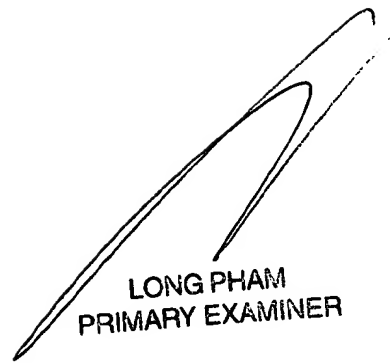

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
